

The new design gives the CC and TS control panels a contemporary look. See separate news letter for CC 100, CC 200 and CC 300.

## Updated control panels

Tylö's control panels have undergone an update and a face lift. The control panels CC 10 and CC 20 has been equipped with DIP-switches which controls the function of the circuit card. Among other things the new DIP-switches let you adjust the operating time and placement of the thermistor.

For CC 20 you can choose between Combi or Tylarium mode. For CC 10, which has been equipped with a light switch, sauna or steam bath mode can be chosen.

The update means that CC 10-3B, CC 10-10B, CC 10-3S, and CC 10-10S are replaced by the new CC 10. The CC 20-3 and CC 20-10 are replaced by the new CC 20. Note! When ordering spare part circuit card for CC10 and CC 20 the DIP-switches have to be adjusted.

All CC control panels have been provided with a black soft-feel surface for a contemporary look. The TS control panels have a similar look in black plastic.

Available from the end of March 2009.
